DETAILED ACTION

Election/Restrictions

1. Claims 15, 18, and 25-51 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected species B and C, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 11/2/06.
2. Applicant's election with traverse of species A in the reply filed on 11/2/06 is acknowledged. The traversal is on the ground(s) that the searching of the species is not burdensome. This is not found persuasive because the different equations used to set the limiting speed range are viewed as crucial to the invention and would create a burdensome search.

The requirement is still deemed proper and is therefore made FINAL.

3. This application contains claims 15, 18, and 25-51 drawn to an invention nonelected with traverse. A complete reply to the final rejection must include cancellation of nonelected claims or other appropriate action (37 CFR 1.144) See MPEP § 821.01.

Specification

4. The disclosure is objected to because of the following informalities: Figures 4-6 lack a brief description in the spec.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1-14, 16, 17, and 19-24 rejected under 35 U.S.C. 102(b) as being anticipated by Akhteruzzaman (US 6,128,570 A).

Akhteruzzaman discloses a vehicle cruise control system comprising a controller having a processor 10 with database for processing a speed range, a speed sensor 24 for sensing vehicle speed, a fuel controller 20 for controlling fuel supply, and a driver interface 16, for setting upper and lower speed limits, wherein said controller provides an instruction for altering the fuel rate in response to the speed settings and a driver anticipated stop 26 for disengaging the process, as shown in figures 1-2 and recited in columns 2-3.
